Presentation

I am currently a third-year doctoral candidate at ENSAI - CREST Lab., having joined after completing my Master's degree in Statistics and Probability. My academic journey reflects a deep-rooted passion for exploring the intricacies of statistical methodologies and their applications. With a solid foundation in statistical theory and probability, I am dedicated to advancing research in this field through rigorous analysis and innovative approaches. My doctoral studies at ENSAI represent a pivotal chapter in my academic and professional development, where I aim to contribute meaningfully to the advancement of statistical science.

Research Interests

My research focuses on clustering methods and mixture models, with a specific application in sports for populating virtual environments.

Education

- 2023 – Now **École nationale de la statistique et de l'analyse de l'information (ENSAI)**, Rennes, France
Doctoral Student, Advisors: *Matthieu MARBAC, Brigitte GELEIN & Anthony SOREL*
Research: Analysis and clustering of soccer game situations in order to populate virtual environments.
- 2021 – 2023 **Université de Strasbourg**, Strasbourg, France
Master's degree in Statistics, Coordinator of Master's Programs: *Laurent GARDES*
Internship M2, CEDRIC Lab **Multiple imputation using non-parametric regression.**
Supervisors Vincent Audigier, Ferial Bouhadjera and Ndeye Niang.
Description This thesis is based on development of a new sequential multiple imputation method for complex data using non-parametric regression approaches.
- Internship M1, UR 1342 Strasbourg* **Evolution of physical activity during the transition to adulthood.**
Supervisors Christophe Schnitzler and Thibaut Dérigny.
Description Modelling, ANOVA on repeated measures, logistic regression, clustering, R programming, tutoring.
- 2019 – 2021 **Institut de Mathématiques et de Sciences Physiques (IMSP)**, Dangbo, Benin
Master's degree in Statistic and Probability, Coordinator of Master's Programs: *Carlos OGOUYANDJOU*
Internship M2, IMSP CEA-SMIA lab **Statistical analysis of compositional data: case of dimension reduction methods.**
Supervisors Guy Martial Nkiet and Carlos Ogouyandjou.
Description This thesis is based on theoretical analysis of a regression technique in compositional data based on an article.
- 2013 – 2017 **Université de Lomé**, Lomé, Togo
Bachelor's degree in Fundamental Mathematics

Work Experience

- 2023 – Now **Teaching experiences, ENSAI**, Rennes, France.
Inferential Statistics Tutorials for 1st Year (1A) Students and Modeling Practicals for 2nd .Year (2A) Students.

2017 – 2019 **Teaching experiences**, *Lycée de Djaïble*, Lomé, Togo.
Teaching mathematics in the high school level.

Publications & Preprints

2025 **Koffi Amezougui** (ENSAI), Brigitte Gelein (ENSAI), Matthieu Marbac (UBS Vannes), Anthony Sorel (UR2). *Model-Based Clustering of Football Event Sequences: A Marked Spatio-Temporal Point Process Mixture Approach*. Preprint, arXiv:2511.14297v1 (Statistics, Applications).

Conferences and Summer schools

- 13–15 December 2025 **CFE–CMStatistics 2025 — Oral Presentation**, *Model-Based Clustering of Football Event Sequences*, London, United Kingdom.
Conference website
- 1–6 June 2025 **Journées de Statistique 2025 — Oral Presentation**, *Clustering of soccer possessions using mixture of absorbing Markov point processes*, Marseille, France.
Conference website
- February 2024 **University di Roma « La Sapienza » : Statistical Methods for Unsupervised and Supervised Learning with Dimensionality Reduction**, Rome, Italy.
- July 2021 **École mathématique CIMPA : Machine Learning Approach - Applications to Health Data**, Lomé, Togo.

Academic Project

- December 2022 **Machine Learning**.
Comparison of classification methods: Logistic Regression, Discriminant Analysis, Neural Networks, Boosting, Random Forests, Support Vector Machine using R to determine the most effective one for predicting breast cancer data.
- April 2022 **Statistic with SAS**.
Descriptive analysis, model selection protocol, and logistic regression.
- March 2022 **Development of an R package**.
Creation of an R package dealing with simulation, modeling, and analysis of time series (ARMA, VAR, and impulse response functions). Utilization of the tidyverse library.
- February 2022 **Statistic with Python**.
Descriptive analysis, mean comparison test, ANOVA, linear regression, machine learning.

Skills

- Programming R, Python, SAS
- Languages French (fluent), English (B2)
- Pedagogical Training Open Badge — Teaching in Higher Education, French Ministry of Higher Education (MESR), 2025 [Link]

Certifications

- May 2021 **Public Speaking Skills**, *Online from DAAD Kairo Akademie (DKA)*.
- November 2020 **The electronic library resources blended learning workshop**.

References

Below are individuals who can provide insight into my work capabilities:
